

Report on Attendance at the 14th International Junior Academy in Budapest

On August 08-10, 2024, I had the privilege of attending the 14th Junior Academy in Budapest, an event that was an invaluable opportunity to deepen my understanding of breast pathology from Prof. Kulka and dr Lacroix-Triki, hematopathology from Prof. Hansmann and soft tissue pathology from Prof. Wardelmann and to be introduced to liquid lung biopsies by Prof. Farbre and mediastinal pathology and diseases of the thymus by Prof. Ströbel, while also fostering connections with both established experts and fellow professionals from around the globe.

The school provided a platform to engage with distinguished professors and peers from diverse geographical backgrounds. Networking with international colleagues offered valuable perspectives on how different regions approach similar pathological issues, broadening my understanding of global practices and innovations in pathology. Engaging with my peers from other countries led to potential collaborative research projects and the exchange of ideas on tackling common challenges as a trainee in pathology.

Attending the 14th Junior Academy for Pathology was a profoundly enriching experience. The insights gained in this year's Summer school will undoubtedly enhance my clinical practice and research endeavors. The opportunity to connect with professors and peers has not only expanded my professional network but also opened doors for future collaborations.

I am very grateful for this opportunity and would like to thank the Vladimir Totović Foundation for allowing me to be a part of this edifying experience and to Frau Schmidt for excellent organization and communication. I look forward to applying the knowledge and connections gained from this Academy to advance my work.

dr Milica Bogosavljević
